

U = U

UNDETECTABLE = UNTRANSMITTABLE

DID YOU KNOW...
HIV MEDICINE CAN PREVENT HIV TRANSMISSION?

ANTIRETROVIRAL THERAPY (ART)

ART is recommended for all people living with HIV. Treatment should begin as soon as possible after an HIV diagnosis.

HIV medicine can:

- Lower the amount of HIV virus in the blood.
- Slow down damage to the immune system.
- Improve overall health & lifespan.
- Eliminate the likelihood of transmitting HIV to others.

VIRAL LOAD

A measure of the amount of HIV virus in the blood

UNDETECTABLE

When the viral load is so low that it cannot be detected

VIRAL SUPPRESSION

When the viral load is below 200 copies/milliliter

PEOPLE WHO TAKE HIV MEDICATION AND GET AND STAY UNDETECTABLE DON'T TRANSMIT HIV TO OTHERS!
