

**DID YOU KNOW...
HIV MEDICINE CAN
PREVENT HIV
TRANSMISSION?**

U = U

**UNDETECTABLE =
UNTRANSMITTABLE**

When people living with HIV get and stay undetectable,
they can't sexually transmit HIV to others!

When taken as prescribed, HIV medication can:

- Slow down damage to the immune system
- Improve overall health & lifespan
- Prevent sexual transmission of HIV

*Talk to a
medical
provider about
your options!*
